DETAILED ACTION

Drawings

1. New corrected drawings are required in this application because the most recent drawings were submitted with an unentered after final amendment. Also note that the faxed copies in that amendment were not sufficiently clear, due to the fax transmission. Applicant is advised to employ the services of a competent patent draftsman outside the Office, as the U.S. Patent and Trademark Office no longer prepares new drawings. The corrected drawings are required in reply to the Office action to avoid abandonment of the application. The requirement for corrected drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-5, 7, 10, and 11 are rejected under 35 U.S.C. 102(b) as being anticipated by Daffara et al. (U.S. Patent 5,987,122). Daffara et al. discloses a hinge having a one piece shaft part (32, 64). There is a bearing surface (32) and a second portion (64) extending radially beyond the bearing surface (32). There is a housing (54) having an engagement surface (62) engaging with the second portion (64) to restrain the shaft from rotational movement. The shaft

Art Unit: 3671

is moveable relative to the housing part between engaged (Figures 5 and 6, for example) and disengaged (Figure 7, for example) positions.

Regarding claims 2 and 3, the second portion and engagement surface are not enclosed by the hinge surface.

Regarding claims 4 and 5, there is a spring (42, 52) which biases in a force parallel to the axis of rotation.

Regarding claim 7, engagement surface is a walled groove.

Regarding claim 10, the hinge is within an electronic device.

Regarding claim 11, the shaft and housing are fixed to respective body elements.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 8 and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Daffara et al., as applied above. Daffara et al. teaches a single second portion and engagement surface; however, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have used pairs of these elements in order to more firmly secure the hinge in the wide-open position, for example. Also, note the duplication of parts is not patentable in this instance.

Response to Arguments

6. Applicant's arguments filed 5/15/2003 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gary Hartmann whose telephone number is 703-305-4549. The examiner can normally be reached on Monday through Friday, 9am-6pm.
